A word from the Manager

I wonder how many parents would consider fund management as a worthy career for their sons and daughters? I would, but then I've enjoyed being part of the fund management industry for nearly thirty years and seen its impact on people's lives.

There is no doubt that investing has changed in the past three decades and will most likely be a completely different art (or is it a science?!) in future decades.

It used to be that being a good fund manager essentially involved beating a benchmark index by picking the good investments from the index and avoiding the bad.

You could identify the investment philosophy or style that most resonated with your own personality — a growth investor would look for investments that offered the best prospects for profit growth, and a value investor would look for investments that were cheaper, and therefore offered better value than the rest of the index.

You could decide how often you transacted — perhaps you were a buy and hold investor like Warren Buffett, buying shares in companies that you intended to own forever. Or you could attempt to time the market and get into investments before other investors discovered them, and sell before others sold and pushed the price down.

Investors would generally appreciate the skill and effort required of a stock picker and would seek out those who had a better-than-average track record of success.

But that was in the old days. As in all industries, the investment business has experienced significant change, and the rate of change is accelerating.

Much of the change relates to the investment industry itself — investment styles are now interchangeable with growth investments often behaving like value investments and vice versa; information and markets change so rapidly that owning anything forever is out of the question; and few fund managers have been able to achieve a better-than-average track record, so investors are unsure who to pick!

Significant change has also occurred in investors' attitudes. Having a fund manager beat an index has become less important than the manager generating returns to beat the bank deposit rate. Today dividend yield is considered more important and appealing than capital growth. Investors

want to have a greater say in the sort of investments their fund manager owns (eg. ethical and socially responsible businesses) yet at the same time, they like passive or index funds which offer no opportunity to choose particular industries or companies.

Our ageing population and the era of low interest rates and economic growth has led to another significant change — a focus on 'decumulation' rather than accumulation. That is, as many people are investing to ensure their funds last their lifetime and provide a retirement income, as those who are looking to accumulate assets and grow them as quickly as possible.

The one thing that hasn't changed about fund management, and the reason that I would still recommend it as a career choice for my children, is that fund managers perform a vital function, and the number of people needing investment management services is going to keep growing as people live for longer.

Investors don't just need good stock-picking, or a choice of investment products; they need someone to hold their hand and make the right decisions for them, in good markets and bad, so they can achieve their financial goals. Clients need someone to anticipate changing trends and adjust accordingly, so that whatever happens next, their financial journey will continue as planned.

We've provided the stock-picking and the diversified range of investment products and we've made some good decisions to ensure our performance remains competitive. But most importantly, we've helped investors stay on course and reach their destination; that's our primary function.

Carmel Fisher
Managing Director, Fisher Funds

Total Shareholder Return*	+3.7%	+2.0%	+12.5%	+39.6%	+135.5%

***Definitions of non-GAAP measures:**

Adjusted Net Asset Value (NAV)

The adjusted NAV per share represents the total assets of Kingfish (investments and cash) minus any liabilities (expenses and tax), divided by the number of shares on issue. Adjusted NAV adds back dividends paid to shareholders and adjusts for the impact of any warrants that were exercised at a price that was different to the NAV at the time they were exercised. Adjusted NAV assumes all dividends are reinvested in the company's dividend reinvestment plan and excludes imputation credits.

Total Shareholder Return (TSR)

The TSR combines the share price performance, the warrant price performance (when warrants are on issue), the value in converting warrants into shares, and dividends paid to shareholders.

TSR assumes:

- » all dividends paid are reinvested in the company's dividend reinvestment plan at the discounted dividend reinvestment price and excludes imputation credits;
- » all shareholders that have received warrants (for free), have subsequently exercised their warrants and bought shares.

Total Shareholder Return

to 31 August 2016

August's Biggest Movers

Typically the Kingfish portfolio will be invested 90% or more in equities.

The remaining portfolio is made up of another 16 stocks and cash.

About Kingfish

Kingfish is an investment company listed on the New Zealand Stock Exchange. The company gives shareholders an opportunity to invest in a diversified portfolio of between 15 and 25 growing New Zealand companies through a single, professionally managed investment. The aim of Kingfish is to offer investors competitive returns through capital growth and dividends.

Management

Kingfish's portfolio is managed by Fisher Funds Management Limited. Murray Brown (senior portfolio manager) and Ashley Gardyne (senior investment analyst) take the prime management responsibilities and are highly experienced in researching and investing in New Zealand growth companies with over 40 years combined experience. Fisher Funds are based in Takapuna, Auckland.

Board

The Manager has authority delegated to it from the Board to invest according to the Management Agreement and other written policies. The Board of Kingfish comprises independent directors Alistair Ryan (Chairman), Carol Campbell and Andy Coupe; and non-independent director Carmel Fisher.

Capital Management Strategies

Regular Dividends

- » Quarterly distribution policy introduced in June 2009
- » Under this policy, 2% of average NAV is targeted to be paid to shareholders quarterly
- » Dividends paid by Kingfish may include dividends received, interest income, investment gains and/or return of capital
- » This policy is well received by shareholders as it provides an attractive and regular return that is referable to the NAV
- » Shareholders who prefer to have increased capital rather than a regular income stream have the opportunity to participate in the company's dividend reinvestment plan (DRP)
- » Shares issued to DRP participants are at a 3% discount to market price
- » Kingfish became a portfolio investment entity on 1 October 2007. As a result, dividends paid to New Zealand tax resident shareholders have not been subject to further tax

Share Buyback Programme

- » Kingfish has a buyback programme in place allowing it (if it elects to do so) to acquire up to 6.2m of its shares on market in the year to 31 October 2016
- » Shares bought back by the company are held as treasury stock
- » Shares held as treasury stock are available to be re-issued for the dividend reinvestment plan and to pay performance fees

Warrants

- » On 19 April 2016, a new issue of warrants (KFLWD) was announced
- » The warrants were issued at no cost to shareholders and in the ratio of one warrant for every four Kingfish shares held
- » Exercise Price = \$1.32 per Share on the exercise of each Warrant (adjusted for dividends declared during the period up to the Exercise Date)
- » Exercise Date = 5 May 2017
- » The final Exercise Price will be announced and an Exercise Form will be posted to warrant holders in April 2017
