A word from the Manager – Quality Pays

Fisher Funds' Chief Investment Officer, Frank Jasper explains what 'quality' means when looking to invest.

We talk a lot about "quality" when we consider potential investments for the Kingfish portfolio. The idea of quality is central to the STEEPP investment process which is the lens we use whenever we look at a company.

One of the most important measures of a company's quality are the returns that it is able to generate on each dollar that it invests on behalf of shareholders. This is common sense. If a company can earn a 15% return on every dollar invested versus another company that only earns 5%, it is pretty obvious that the company generating the 15% return is a higher quality company.

While this may be obvious, it understates just how important high returns on invested capital are to creating future value for shareholders.

Let's imagine two companies. Both of our mythical companies earn \$100 profit this year. Typically a company would pay some of these profits out as dividends and retain some of these profits to fuel future growth.

For our example let's assume that half of all profits are paid out. Let's go one step further and assume one of our companies, Company 1, is high quality and generates a 15% return on every dollar invested. The other company, Company 2, is a lower quality company which has a 5% return on invested capital.

As Warren Buffett says "time is the friend of the wonderful company and the enemy of the mediocre." The idea is aptly demonstrated by our two mythical companies. Company 1 generates strong returns on every dollar of capital it retains. These higher returns mean more profits over time. Company 1 is able to grow future profits rapidly. Company 2, the poorer quality company, grows future profits at a much slower clip.

The difference is stark. In our example, using our assumption of a consistent rate of return on invested capital and a 50% dividend pay out, the profits of Company 1 more than double over the next ten years. Comparatively, profits for the lower quality Company 2, rise only 28% over the same time.

Quality pays — Profits over time

It's pretty clear which of these two companies you would want to own. Quality really does pay off in the long run and it's these quality companies that we seek to own.

Speaking of quality, during the quarter we introduced Xero into the Kingfish portfolio. Xero is a great example of a quality company with a number of positive attributes. It is the market leading provider of cloud based accounting software for small-to-medium businesses and their accountants in New Zealand, Australia and the UK, with growing presences in the USA and other markets such as South East Asia, Europe and Africa. It has also achieved impressive subscriber growth to date and we believe that Xero will continue to be the innovator of the industry. We have been reluctant to own Xero historically due to the lack of bottom line profitability however we estimate that the Australian/New Zealand businesses were profitable in the 2017 financial year and that Xero is on track to achieve higher group earnings this year and in the future. We are pleased to have Xero in the Kingfish portfolio.

Non-GAAP Financial Information

Kingfish uses non-GAAP measures, including adjusted net asset value, gross performance return and total shareholder return. The rationale for using such non-GAAP measures is as follows:

- » adjusted net asset value – the underlying value of the investment portfolio adjusted for capital allocation decisions,
- » gross performance return – the Manager's portfolio performance in terms of stock selection and hedging of currency movements, and
- » total shareholder return – the return to an investor who reinvests their dividends, and if in the money, exercises their warrants at warrant maturity date for additional shares.

All references to including adjusted net asset value, gross performance return and total shareholder return in this monthly update are to such non-GAAP measures. The calculations applied to non-GAAP measures are described in the Kingfish Global Non-GAAP Financial Information Policy. A copy of the policy is available at <http://kingfish.co.nz/about-kingfish/kingfish-policies/>

About Kingfish

Kingfish is an investment company listed on the New Zealand Stock Exchange. The company gives shareholders an opportunity to invest in a diversified portfolio of between 15 and 25 quality growing New Zealand companies through a single, professionally managed investment. The aim of Kingfish is to offer investors competitive returns through capital growth and dividends.

Management

Kingfish's portfolio is managed by Fisher Funds Management Limited. Sam Dickie (Senior Portfolio Manager), Zoie Regan (Senior Investment Analyst) and Matt Peek (Investment Analyst) have prime responsibility for managing the Kingfish portfolio. Together they have over 40 years combined experience and are very capable of researching and investing in the quality New Zealand companies that Kingfish targets. Fisher Funds is based in Takapuna, Auckland.

Board

The Manager has authority delegated to it from the Board to invest according to the Management Agreement and other written policies. The Board of Kingfish comprises independent directors Alistair Ryan (Chair), Carol Campbell and Andy Coupe; and non-independent director Carmel Fisher.

Capital Management Strategies

Regular Dividends

- » Quarterly distribution policy introduced in June 2009
- » Under this policy, 2% of average NAV is targeted to be paid to shareholders quarterly
- » Dividends paid by Kingfish may include dividends received, interest income, investment gains and/or return of capital
- » Shareholders who prefer to have increased capital rather than a regular income stream have the opportunity to participate in the company's dividend reinvestment plan (DRP)
- » Shares issued to DRP participants are at a 3% discount to market price
- » Kingfish became a portfolio investment entity on 1 October 2007. As a result, dividends paid to New Zealand tax resident shareholders have not been subject to further tax

Share Buyback Programme

- » Kingfish has a buyback programme in place allowing it (if it elects to do so) to acquire up to 7.7m of its shares on market in the year to 31 October 2017
- » Shares bought back by the company are held as treasury stock
- » Shares held as treasury stock are available to be re-issued for the dividend reinvestment plan and to pay performance fees

Warrants

- » Warrants put Kingfish in a better position to grow further, improve liquidity, operate efficiently and pursue other capital structure initiatives as appropriate
- » A warrant is the right, not the obligation, to purchase an ordinary share in Kingfish at a fixed price on a fixed date
- » There are currently no warrants on issue
